Ultra-compact Laser Sensor Amplifier Built-in

EX-L200 SERIES

CE UKCA

FDA Conforming to FDA regulations

GB Conforming to GB 7247.1

This product is classified as a Class 1 Laser Product in IEC / EN / JIS / GB / KS standards and in FDA* regulations. Do not look at the laser beam through optical system such as a lens.

*This product complies with the FDA regulations (FDA 21 CFR 1040.10 and 1040.11) in accordance with FDA Laser Notice No. 56, except for complying with IEC 60825-1 Ed. 3.

Introducing ultra-compact amplifier built-in laser sensor

Ultra-compact

Due to the customized IC and optical design, high precision detection is fulfilled with directivity and visibility achievable only by laser. The laser adopted is Class 1 (IEC / EN / JIS / GB / KS / FDA) laser that is safe to use, so that there is no need to separate the areas of sensor usage.

(Thru-beam type)

THRU-BEAM TYPE

Minute object detection type EX-L211

Spread the beam and lower its density, thus even a minute object can be detected with a small change in the light received intensity. Spot size: 6 × 4 mm 0.236 × 0.157 in approx. (Visual reference value at a distance from the emitter of 1 m 3.281 ft)

Long sensing range type EX-L212

A long range detection of 3 m 9.843 ft is achieved. High precision detection with minimum beam spread is possible even in a long range.
Spot size: 8 × 5.5 mm 0.315 × 0.217 in approx. (Visual reference value at a distance from the emitter of 1 m 3.281 ft)

RETROREFLECTIVE TYPE

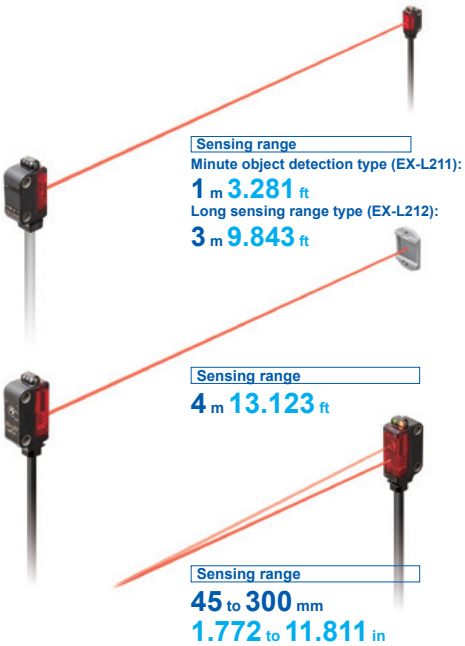
Long sensing range type EX-L291

Achieving ease of installation and 4 m 13.123 ft long sensing range.
Spot size: 6 × 4 mm 0.236 × 0.157 in approx. (Visual reference value at a distance from the emitter of 1 m 3.281 ft)

SPOT REFLECTIVE TYPE

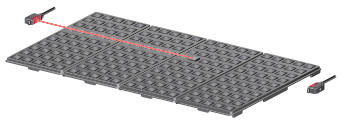
Minute object detection type EX-L221

Highly precise sensing with minimum 0.01 mm 0.0004 in diameter. Many applications are possible due to the 300 mm 11.811 in long sensing range.
Spot size: ø1 mm ø0.039 in or less (Reference value at a distance from the emitter of 300 mm 11.811 in)

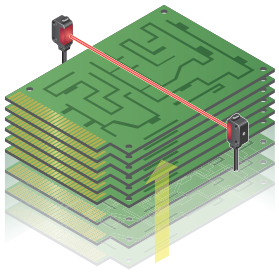


APPLICATIONS

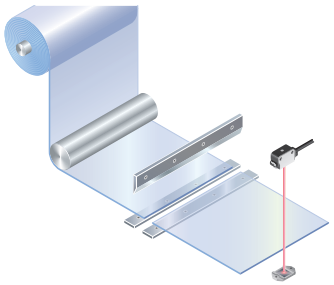
Detecting ICs that are out of position in multiple palettes



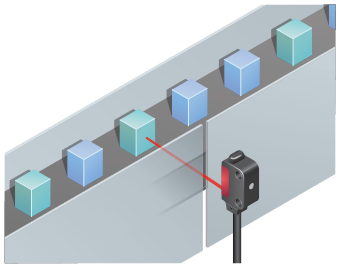
Confirming arrival of substrate



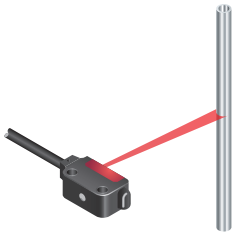
Determining cutting position of sheet



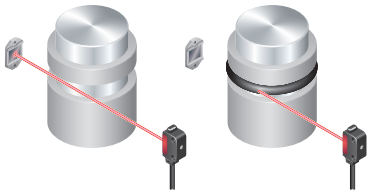
Sensing unevenly-colored workpieces



Sensing glossy or curved-surface workpiece, such as metallic pipes



Detecting O-ring



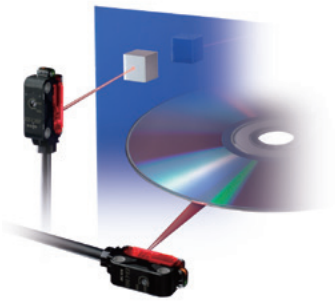
CONVERGENT REFLECTIVE TYPE

Spot type EX-L261

Highly precise sensing with minimum 0.01 mm 0.0004 in diameter. Not affected by the background, and able to reliably sense unevenly-colored workpieces.
Spot size: ø1 mm ø0.039 in or less (Reference value at a sensing distance of 50 mm 1.969 in)

Line spot type EX-L262

Able to sense thin, glossy or curved-surface workpieces due to line beam.
Spot size: 5 × 1 mm 0.197 × 0.039 in approx. (Visual reference value at a sensing distance of 50 mm 1.969 in)



Sensing range
Spot type (EX-L261):
20 to **50** mm
0.787 to **1.969** in

Sensing range
Line spot type (EX-L262):
20 to **70** mm
0.787 to **2.756** in

HIGH PRECISION

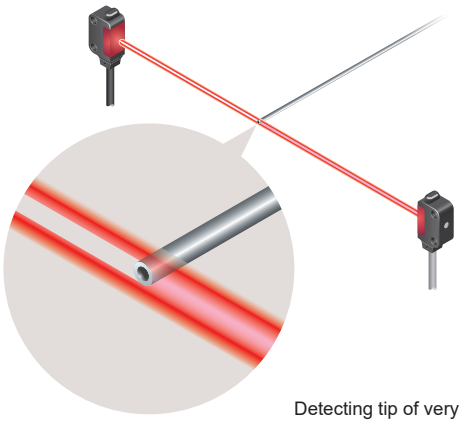
Highly accurate detection EX-L211/L221

Suitable for positioning and minute object detection

A repeatability of 0.02 mm 0.0008 in or less at a range of from 100 to 200 mm 3.937 to 7.874 in makes this type best suitable for positioning applications (typical, **EX-L221**). Moreover, it boasts a top-class detection precision in the compact laser sensor category with the gold wire of ø0.01 mm ø0.0004 in.

Model No. (Minute object detection type)	Minimum sensing object (Typical)	Repeatability (Typical)
EX-L211 (Thru-beam type)	ø0.3 mm ø0.012 in	0.01 mm 0.0004 in or less
EX-L221 (Spot reflective type)	ø0.01 mm ø0.0004 in	0.02 mm 0.0008 in or less

* Typical values when the sensitivity adjuster is optimally adjusted.



Detecting tip of very thin pipe

Dependable technology yields high precision

Incorporating a high-precision aspheric glass lens

Light aberrations are reduced and a high definition laser spot is possible by incorporating a molded aspheric glass lens.

Small receiver aperture for precision detection EX-L211/L212

Errant beams are eliminated by the ø0.5 mm ø0.020 in receiver aperture. Only beams entering the aperture are used, making for high-precision sensing.

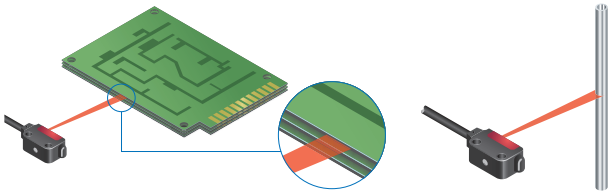
Stable convergent distance sensing EX-L261/L262

For sensing when background object presents

Due to convergent distance sensing, the background has very little effect, enabling stable sensing. Sensitivity adjuster allows you to adjust sensitivity to avoid sensing background objects when the distance between the workpiece and background objects is small.

For sensing thin, glossy or curved-surface workpieces (Line spot type EX-L262)

Able to sense glossy or curved-surface workpieces, such as PCB and metallic pipes, due to a wide line laser beam.



For sensing unevenly-colored workpieces

Able to reliably sense unevenly-colored workpieces.

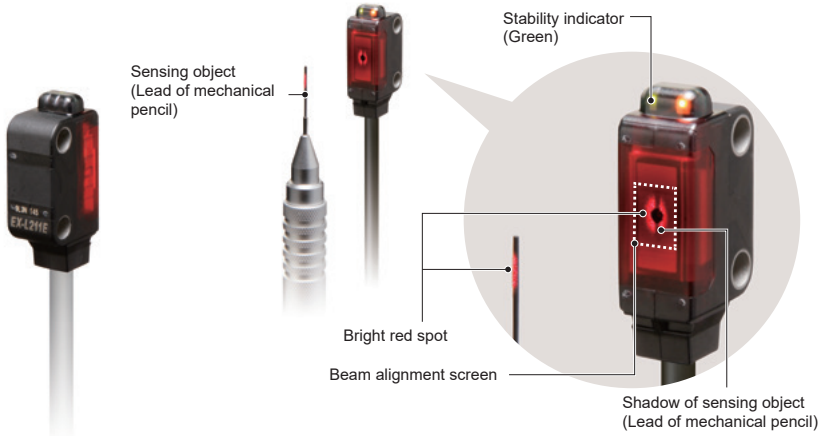
EASY ALIGNMENT

Easy beam-axis alignment

EX-L211/L212

Visual positioning is easy due to silhouetting a sensing object against a receiver.

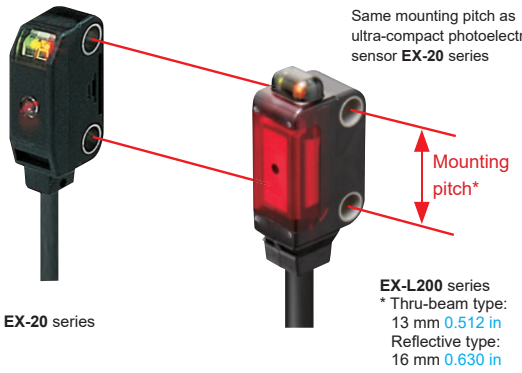
Visually confirm the optimal receiver position, adjusting the beam axis by aligning the objects while watching the red spot on the beam alignment screen. The diagram on the right shows an example with the lead of a mechanical pencil being detected through visual adjustment.



EASY SETTING

Same mounting pitch as ultra-compact photoelectric sensor

EX-L200 series has the same mounting pitch as ultra-compact photoelectric sensor **EX-20** series so that the time taken in designing is saved.



ENVIRONMENTAL RESISTANCE

Strong against water and dust with protection structure IP67

The sensor can be used even in environment where water or dust present because of its protection structure IP67.

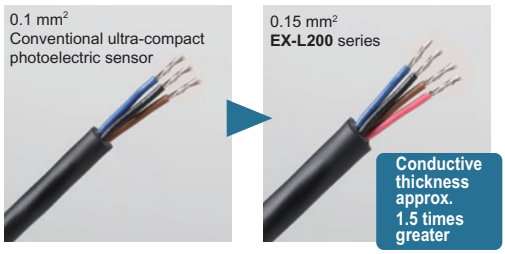
EASY TO USE

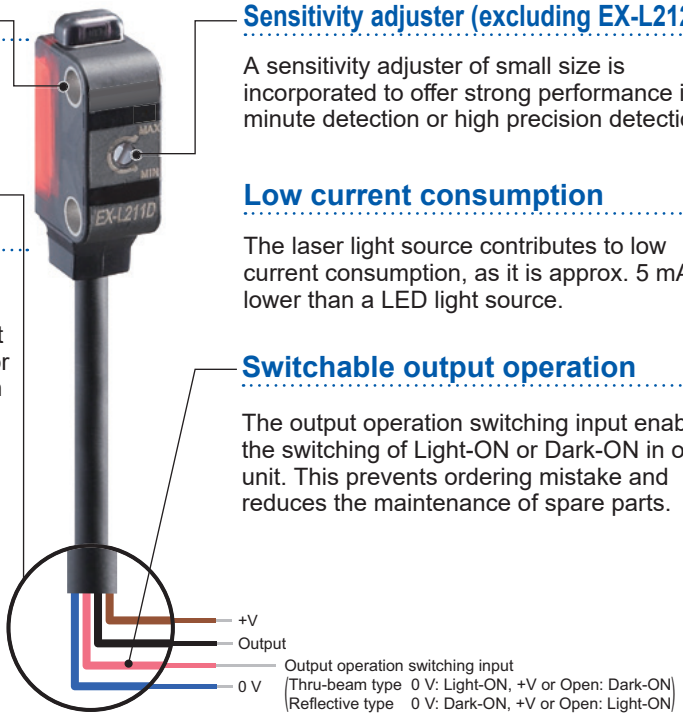
M3 screw used for secure tightening

The mounting holes have metal sleeves inserted to prevent damage to the sensor due to over tightening of the screws.
(Tightening torque: 0.5 N·m)

Conductor thickness 1.5 times increased to make wiring easier

The lead wire conductor's thickness is increased to 0.15 mm^2 from 0.1 mm^2 of the conventional ultra-compact photoelectric sensor. This makes it easier to perform crimpling work on the cables for better workability. In addition, the tensile strength of the crimpling area has become stronger.





Sensitivity adjuster (excluding EX-L212□)

A sensitivity adjuster of small size is incorporated to offer strong performance in minute detection or high precision detection.

Low current consumption

The laser light source contributes to low current consumption, as it is approx. 5 mA lower than a LED light source.

Switchable output operation

The output operation switching input enables the switching of Light-ON or Dark-ON in one unit. This prevents ordering mistake and reduces the maintenance of spare parts.

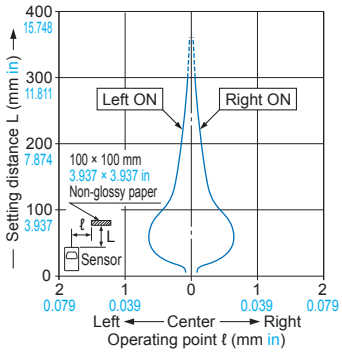
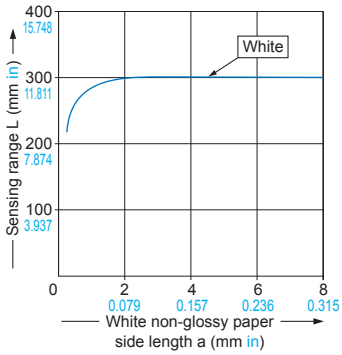
Sensing field



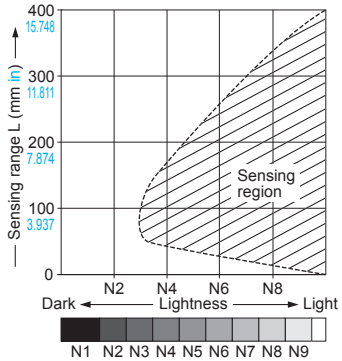
Correlation between sensing object size and sensing range



As the sensing object size becomes smaller than the standard size (white non-glossy paper 100 × 100 mm 3.937 × 3.937 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 100 × 100 mm 3.937 × 3.937 in white non-glossy paper is just detectable at a distance of 300 mm 11.811 in.)

Correlation between lightness and sensing range



The sensing region (typical) is represented by oblique lines in the left figure. However, the sensitivity should be set with an enough margin because of slight variation in products.

(The graph is drawn for the maximum sensitirity setting.)

(Lightness shown on the left may differ slightly from the actual object condition.)

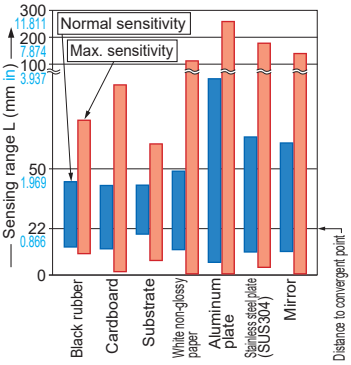
(Lightness shown on the left may differ slightly from the actual object condition.)

Correlation between material and sensing range (face-to-face)



The bars in the graph indicate the sensing range (typical) for the respective material. However, there is a slight variation in the sensing range depending on the product. Further, if there is a reflective object (conveyor, etc.) in the background of the sensing object, since it affects the sensing, separate it by more than twice the sensing range shown in the left graph, or adjust the sensitivity adjuster. Make sure to confirm detection with an actual sensor.

Further, if there is a reflective object (conveyor, etc.) in the background of the sensing object, since it affects the sensing, separate it by more than twice the sensing range shown in the left graph, or adjust the sensitivity adjuster. Make sure to confirm detection with an actual sensor.

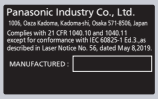
PRECAUTIONS FOR PROPER USE

• This catalog is a guide to select a suitable product. Be sure to read the instruction manual attached to the product prior to its use.

• Never use this product as a sensing device for personnel protection.
• In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Cautions for laser beams

• This product is classified as a Class 1 Laser Product in IEC / EN / JIS / GB / KS standards and in FDA* regulations. Do not look at the laser beam through optical system such as a lens.
• The following label is attached to the cable. Handle the product according to the instruction given on the warning label.



Proof label

Warning label

*This product complies with the FDA regulations (FDA 21 CFR 1040.10 and 1040.11) in accordance with FDA Laser Notice No. 56, except for complying with IEC 60825-1 Ed. 3.

Safety standards for laser beam products

• For the purpose of preventing any injury which may occur to the user by the use of the laser product in advance, the following standards have been established by the IEC Standards, EN Standards, JIS Standards, GB Standards, KS Standards and FDA Regulations.

IEC ... IEC 60825-1: 2014
EN ... EN 60825-1: 2014 / A11: 2021
JIS ... JIS C 6802: 2014
GB ... GB 7247.1-2012
KS ... KS C IEC 60825-1: 2014
FDA ... PART 1040.10, 1040.11 (Laser Notice No.56 applied)

These standards classifies laser products according to the level of hazard and provide the safety measures for respective classes.

Based on the above standards, **EX-L200** series is classified as a Class 1 laser product.

Classification by IEC 60825-1

Classification	Description
Class 1	Lasers that are safe under reasonably foreseeable conditions of operation, including the use of optical instruments for intrabeam viewing.

Note: When an unexpected failure occurs, dangerous radiation may be generated. Therefore, pay special attention to safety.

Safe use of laser products

• For the purpose of preventing users from suffering injuries by laser products, each standard stipulates (Safety of laser products). Kindly check the standards before use.

Mounting

• When mounting this sensor, use a mounting plate (**MS-EXL2-2**, **MS-EXL2-3**). Without using the mounting plate, beam misalignment may occur. Also, install the mounting plate in between the sensor and the mounting surface.
• The tightening torque should be 0.5 N·m or less.

Note: The mounting direction of the mounting plate is fixed. Install in a way so that the bending shape is facing the sensor side.

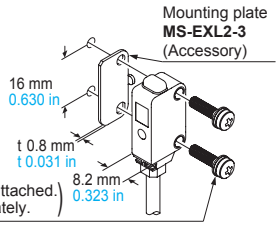
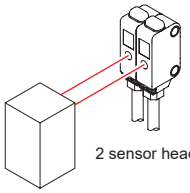
EX-L291□/L221□/L261□/262□



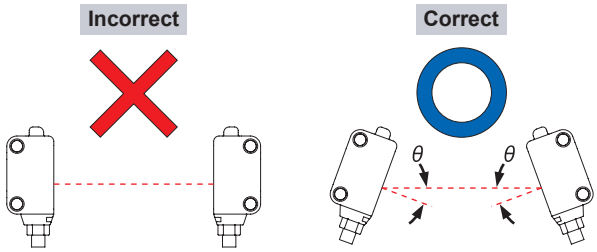
Automatic interference prevention function

• Spot reflective type sensor incorporate this function. Up to two sets of sensor can be mounted closely. (Thru-beam type sensor does not have this function.)



2 sensor heads can be mounted adjacently.

Note: If two spot reflective type sensor are mounted facing each other, they should be angled so as not to receive the beam from the opposing sensor or to detect its front face.



Others

• Do not use during the initial transient time (approx. 50ms) after the power supply is switched ON.
• In case the load and this sensor are connected to different power supplies, be sure to turn ON the power from the sensor.
• The cable may break by applying excess stress in low temperature.
• Do not allow any water, oil fingerprints, etc., which may refract light, or dust, dirt, etc., which may block light, to stick to the emitting/receiving surfaces of the sensor head. In case they are present, wipe them with a clean, soft cloth or lens paper. Do not use this sensor in places having excessive vapor, dust, etc., or where it may come in contact with corrosive gas.
• Take care that the sensor does not come in direct contact with oil, grease, organic solvents, such as, thinner etc., or strong acid, and alkaline.
• Make sure that the power is OFF while cleaning the emitting / receiving windows of the sensor head.
• This device is using a laser which has high directional quality. Therefore the beam possibly be out of alignment by the mounting condition of this device or distortion of housing etc. Make sure to adjust the beam axe alignment before use.
